

EcoCenter @ Wilshire/LaBrea
Los Angeles

Client *Private Developer and the MTA*
Size *2 acre site*
Cost *n.a.*
Scope *Provide urban and architectural design services for a mixed use, transit oriented center featuring sustainable design*

Suisman Urban Design has prepared conceptual site planning and architectural design for a proposed mixed used "EcoCenter" in central Los Angeles. The would embody many of today's best practices of sustainable "green design". The design offers a new public plaza linked to the Wilshire Metro Rapid bus line. New retail would serve both transit riders and nearby residents. An existing building would be renovated, and a new retail structure would incorporate photovoltaic panels and a menu of sustainable building materials. A "clean mobility" center would offer a bikestation with rentals and repairs, and electric cars and scooters for rent.
